

High Performance

Aquatx Cobra Performance range are the kayaks of choice for low-cost, robust training gear. Designed for both speed and distance, Aquatx Performance kayaks offer a great deal whether you are new to multi-sport kayaking or you are an experienced veteran seeking a training boat.

Using polyethylene, Aquatx Cobra Performance Kayaks are more robust and long-lasting, but less expensive than their traditional kevlar and fibreglass counterparts. Get the fitness and performance benefits in a real value for money package that will continue to drive you further for years to come.

Aquatx Cobra Surf Ski

Length: 5.3m Width: 510mm Weight: 22kg

Want the extra thrill of performance surfing? At 5.3 metres long and weighing only 22kg the Aquatx Cobra Surf Ski offers maximum thrills and spills for the dedicated surf athlete.

The Cobra Surf Ski is the fastest polyethylene surf ski on the market and is designed for racing, competition training and high performance exercise. Its long narrow hull has less resistance in the water so it glides effortlessly. The deck shape enhances correct paddling technique by allowing the paddler to plant the entry blade close to the deck at the beginning of each stroke. A molded-in wave deflector helps to keep the bow from nose diving when surfing waves, or when running with a following sea.

A foot-operated rudder provides for easy, controlled turning. The adjustable footrest caters for different leg lengths. The 'kick up' rudder system allows paddlers to move over logs and rocks without damaging the rudder blade. Grab handles are included handles for carrying and rescuing.

Aquatx Cobra Viper

Length: 5.2m Width: 550mm Weight: 22kg

The Aquatx Cobra Viper is a great multi-sport boat as well as a starter or trainer kayak for performance athletes. Its tough polyethylene hull makes it ideal for multi-sport boat events like the New Zealand 'Coast to Coast' race.

Often used as an everyday trainer and club boat, it has great stability and speed and, uniquely in the Cobra range, a 'sit in' design which allows a low center of gravity and low wind drag. The narrow hull and slippery shape makes a very fast performance boat with less resistance in the water so it speeds effortlessly.

The standard configuration includes a multi-sport rudder, OZO foot pedals and foam pillars.

Aquatx Cobra Eliminator

Length: 5m Width: 584mm Weight: 22kg Capacity: 109kg

The Aquatx Eliminator redefines the word 'fast'. It has the sleek look and feel of an Olympic Style K1 and the durability provided by polyethylene construction. It is not only designed for racing but for the use and abuse that is part of competition training, high performance exercise and youth racing programmes.

A foot-operated rudder provides for easy, controlled turning and an adjustable footrest and seat provide an ergonomic fit. The deck shape enhances correct paddling technique by allowing the entry blade hand to come close to the deck at the beginning of the stroke. The Eliminator is available with adjustable seats, adjustable foot pedals and the Cobra rudder system.
